

AWS Type DSC Calibration Block

NDE TECH

The Product from India

The Reference Standards for NDT Industry

DSC Calibration Block

AWS-type block used for shear wave distance and sensitivity calibration.

AWS type DSC Block Distance, sensitivity, refracted angle and beam index calibration for angle beam transducers, per AWS and ASHTO requirements.

Dimension 1" thick, 4" long with 1" and 3" radius.

Contains 3/8" deep x 1/32" radius notch and a 1/8" diameter side drilled hole for 45, 60 and 70 degree probes.

Application: Calibration of transverse and longitudinal wave distance, setting determination of the sound beam point of incidence, angle of propagation and sensitivity.

Material: Available in different grade materials.
